Pages overlap and positioning

① **Overlap**

All pages include an extra margin for overlap, ensuring that no details of the template are lost.

The size of the overlap varies depending on the specific printer.

- ② **1 inch grid (2.54cm)**
3 inch grid (7.62cm)
The grid will help you align the pages perfectly in place.

- ③ **3x3in square (7.62cm)**
Overlap the pages as needed to form a 3x3-inch grid, and your pattern will automatically align.

Method 1.

1. Cut Out the Template: Carefully cut out the shapes from the printed template using scissors.
2. Secure the Template: Place the template pieces on the cardboard and secure them with tape or small weights to prevent slipping.
3. Trace the Outline: Use a pencil or pen to trace around the edges of the template onto the cardboard.
4. Check Your Lines: Double-check that all pieces are traced accurately before removing the template.

Method 2.

- ① **Tape it**
and trace it

- ② **Tracing tool**
- can be pen with some pressure applied
- can be tracing wheel

- ③ **Ready to cut out**

NOTE - mind cardboard structure direction

Tip 1.

The best way to bend cardboard smoothly is to cut slits on one side.

You may use slits as a texture effect.

Tip 2.

Crease slits a little with your fingernails to bend in opposite direction and get smooth front side.

Use it for main part of the box.

Tip 3.

To get the best result, use **paper bleeds** to hide rigid structure of cardboard

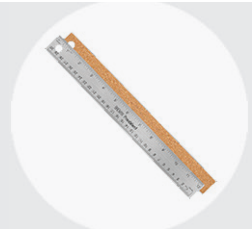

cut half through cardboard and peel off rigid insert leaving only one paper layer of face side

with bleed it is much easier to apply hot glue putting it boldly on the provided bleed surface

as a result you get clean corners and edges.

HOW TO CUT CARDBOARD

PERFECT DIRECT CUT

- take a sharp blade
- use metal ruler
- cut in 2-3 light moves

HOW TO CUT PAPER BLEED

- measure your cardboard thickness
- cut half through
- peel off corrugated structure

HOW TO CUT A PERFECT CIRCLE

- define diameter and radius
- use snape blade and pieces of cardboard to make a tool
- create one tool for each size you need

How to cut
**A PERFECT
CIRCLE**
out of cardboard

HOW TO GLUE CARDBOARD

QUICK CONNECTION USING A HOT GLUE

IT IS QUICK AND STURDY FOR A SMALL PART
OF A BIGGER PROJECT.

- fix panels with a tape
- apply hot glue in a groove
- connect and tape again

GLUE SMALL PANELS IN A BIG ONE USING WHITE GLUE

HAVE TO DRY WELL BEFORE USING.

- add some water to white glue, mix
- apply glue on bottom parts
- lay top parts as a mosaic so they overlap seams.
- apply pressure and let it dry completely

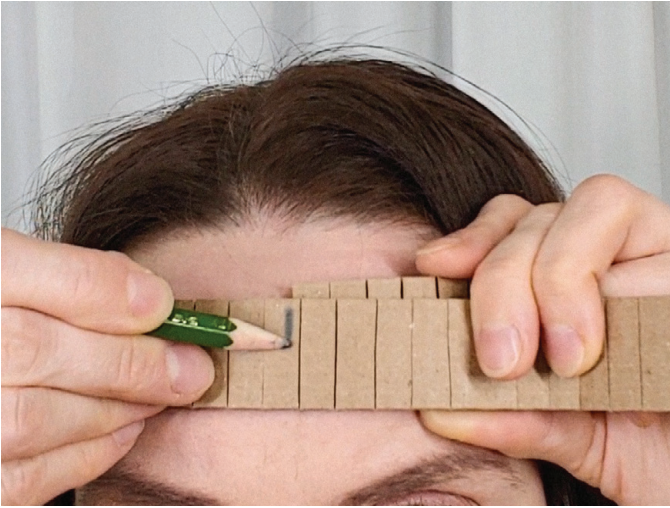

SEAMLESS OVERLAP

- make paper bleed on edges
- apply white glue mixed with water on a bottom parts and bleed
- connect matching parts
- put some pressure and let it dry

How to Measure your head

1. Take a stripe of cardboard, make slits and wrap it around your head.

2. Preparer the second stripe

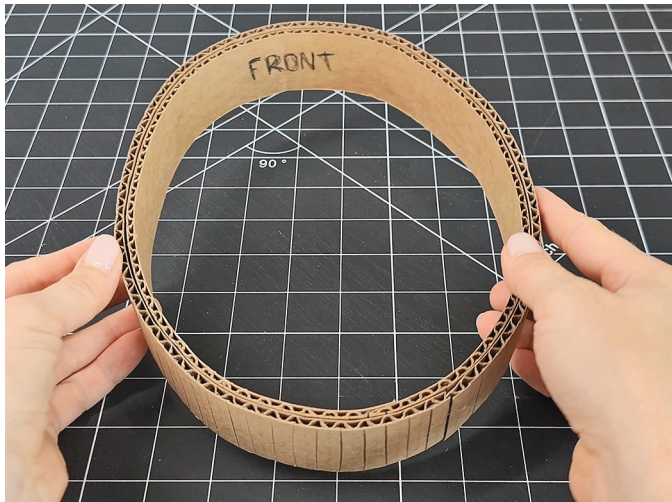

3. Check size for the second stripe, glue it on top and shape it on your head. Be sure hot glue is not leaking!

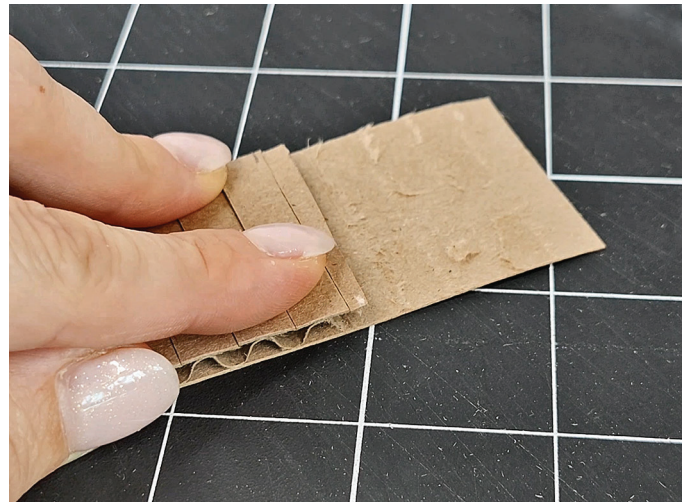

4. Mark the centre on a front part

Helmet Base

1. Mark the front part of your headband.

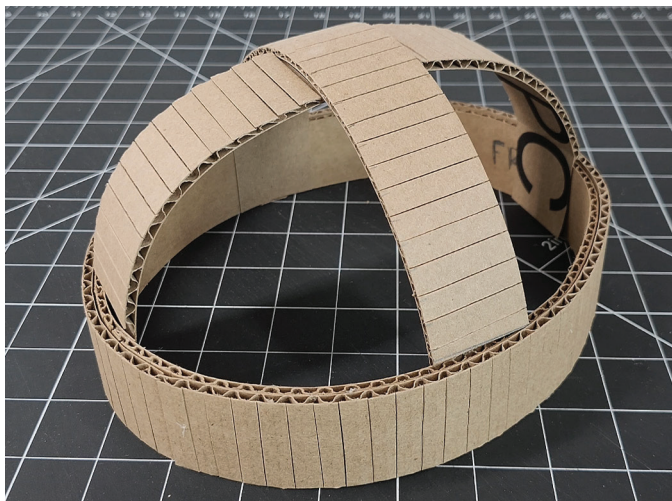

2. Take a cardboard strip with pre-cut slits. Remove the corrugated layer on the sides that will face the inside of the band. Width: 1.5in (3.8cm).

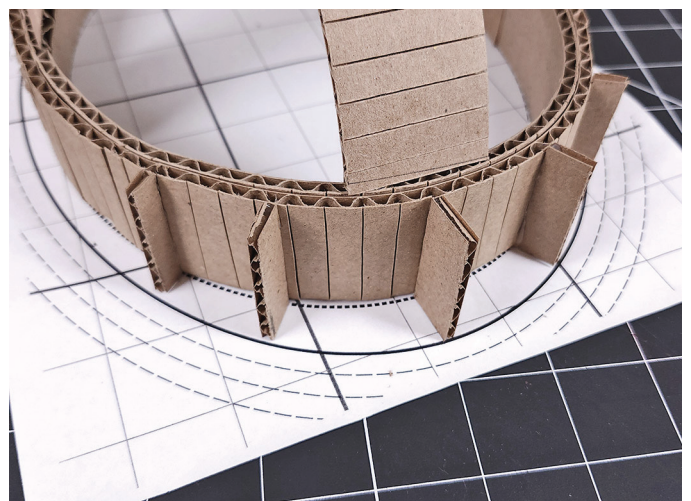

3. Glue the strip to the sides of the headband, focusing on the middle section.

4. Take another cardboard strip with pre-cut slits. Remove the corrugated layer from the sides and the middle for a seamless gluing process.

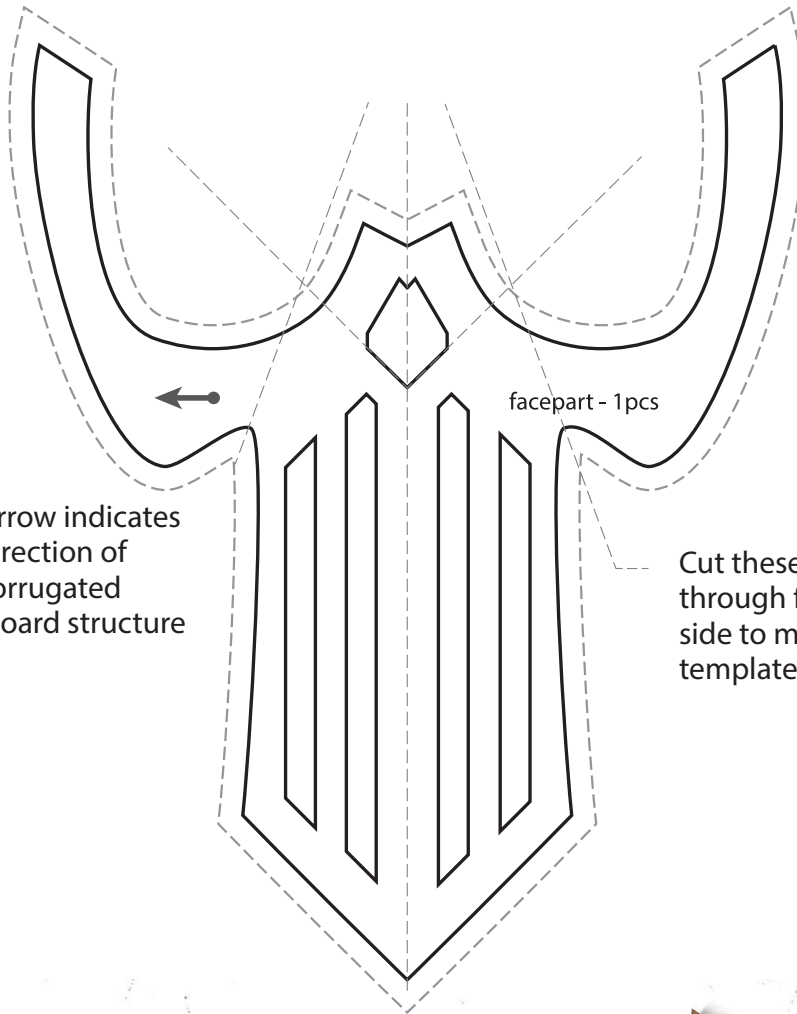

5. Glue the strip to the sides and middle.

6. To keep the mask away from your face, add small pieces of cardboard in your desired size. The template will help maintain the rounded shape.

Step 1. Face Part

The arrow indicates the direction of the corrugated cardboard structure

Cut these slits halfway through from the back side to make your template bendable

The dashed lines indicate the second, larger part that goes underneath the main part

Step2. Face Part

Don't glue side parts yet

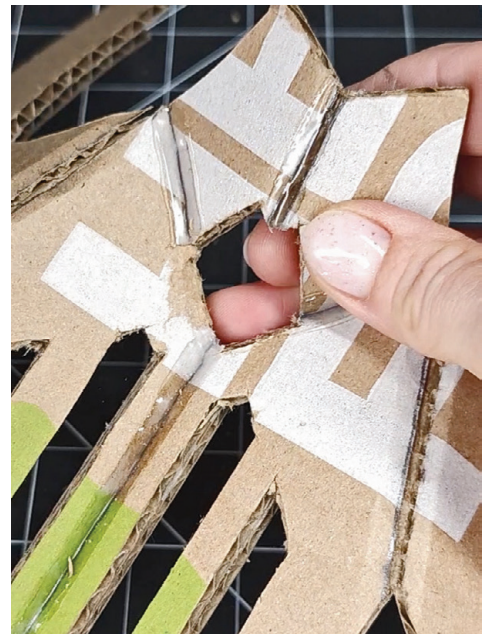

1. Glue two parts together

2. Apply glue to the slits to reinforce them

3. Cut out the openings on the back part

3. Be careful with the nose opening; use an art knife if possible

Step 3. Forehead

All flexible parts are made using the same technique

1. Turn the part onto its back and mark rib gaps (if they are not visible).

2. Cut slits halfway through.

3. Crease slits with fingernails to make your part bend inwards

Step 4. Face Part assembly

1. Align parts together.

Mark and cut off extra from the top piece of the side part.

2. Glue the side part layers together. Glue the forehead to the Face Part. Put some glue on the nose part to keep that area in place.

Step 5. Face Details

1. Cut out Eye piece and eye brows

2. Make them all flexible by cutting and creasing slits on the backs.

3. Eye piece goes from behind and eye brows on front of the face.

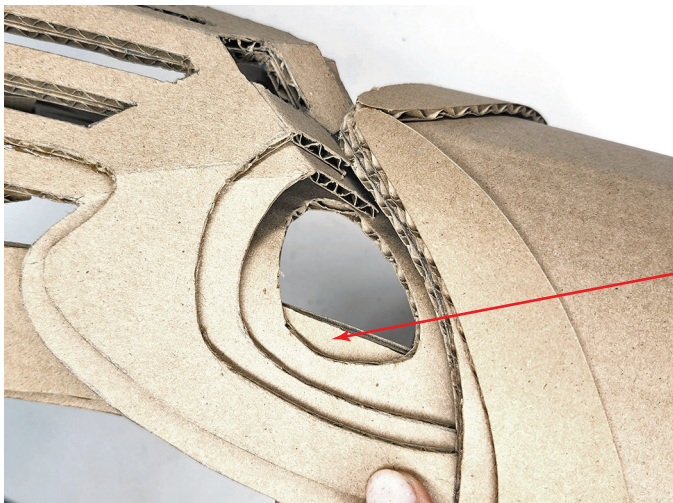

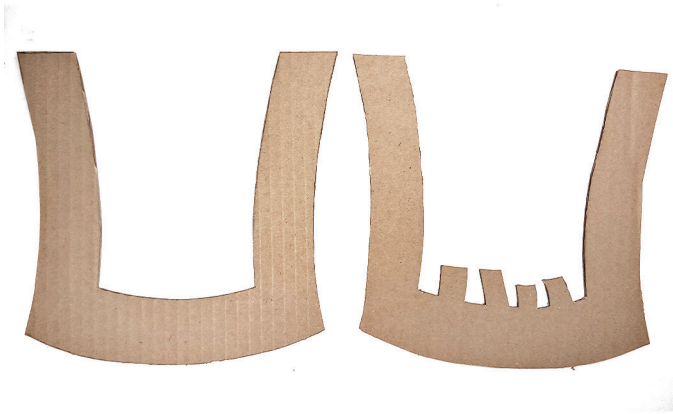

Step 6. Helmet base and Jaw

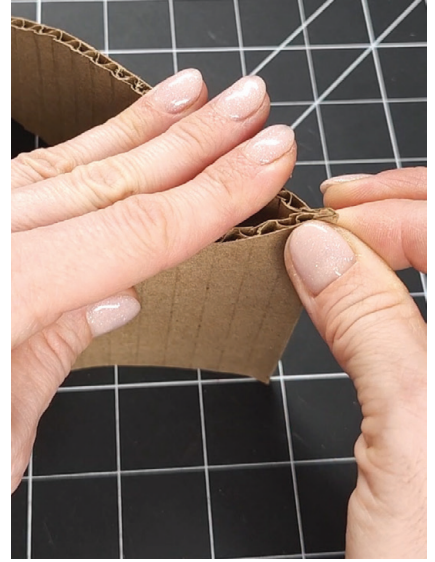

1. Attach the face part to the helmet base.

2. Cut out Jaw two parts, make them flexible and glue together shaping them while glue is hot.

3. Check how Jaw fits before attaching it to the face piece. Cut off the part of the Jaw if it sticks out.

Step 7. Top Part

1. Cut out Top Part be sure the centre of spike is aligned with the slit you are going to cut for easy folding.
2. Make at least 5 parts (make more later if needed).
3. Put a bit of glue in the middle and pinch it to create a spike.
4. Glue to the helmet one by one, cutting extra if needed.

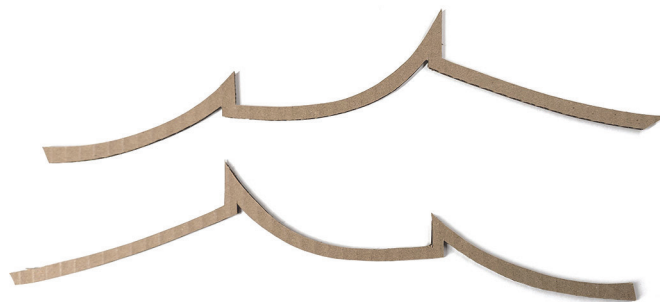

5 top pieces helmet

8 top pieces helmet

Step 8. Wings

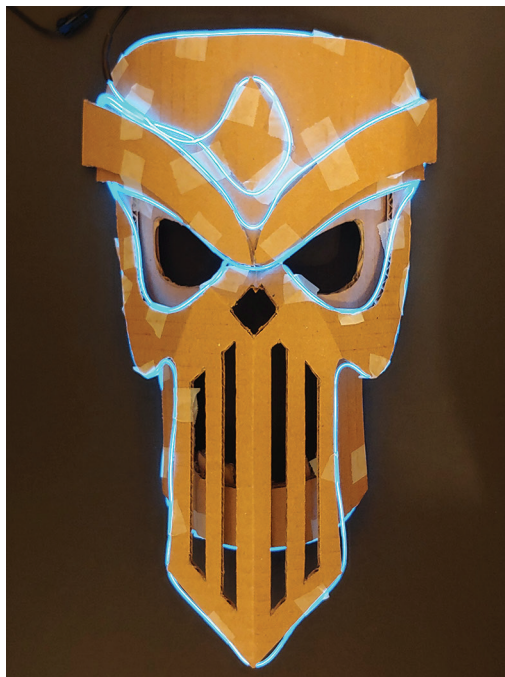

1. Cut out Top Parts. Check how wings goes along with the helmet, you may need to cut some slits on a back to make it smooth. Only in the middle part should be enough.

2. Make a small leg on a back of diamond for the forehead to create an angle.

Step 9. Glowing

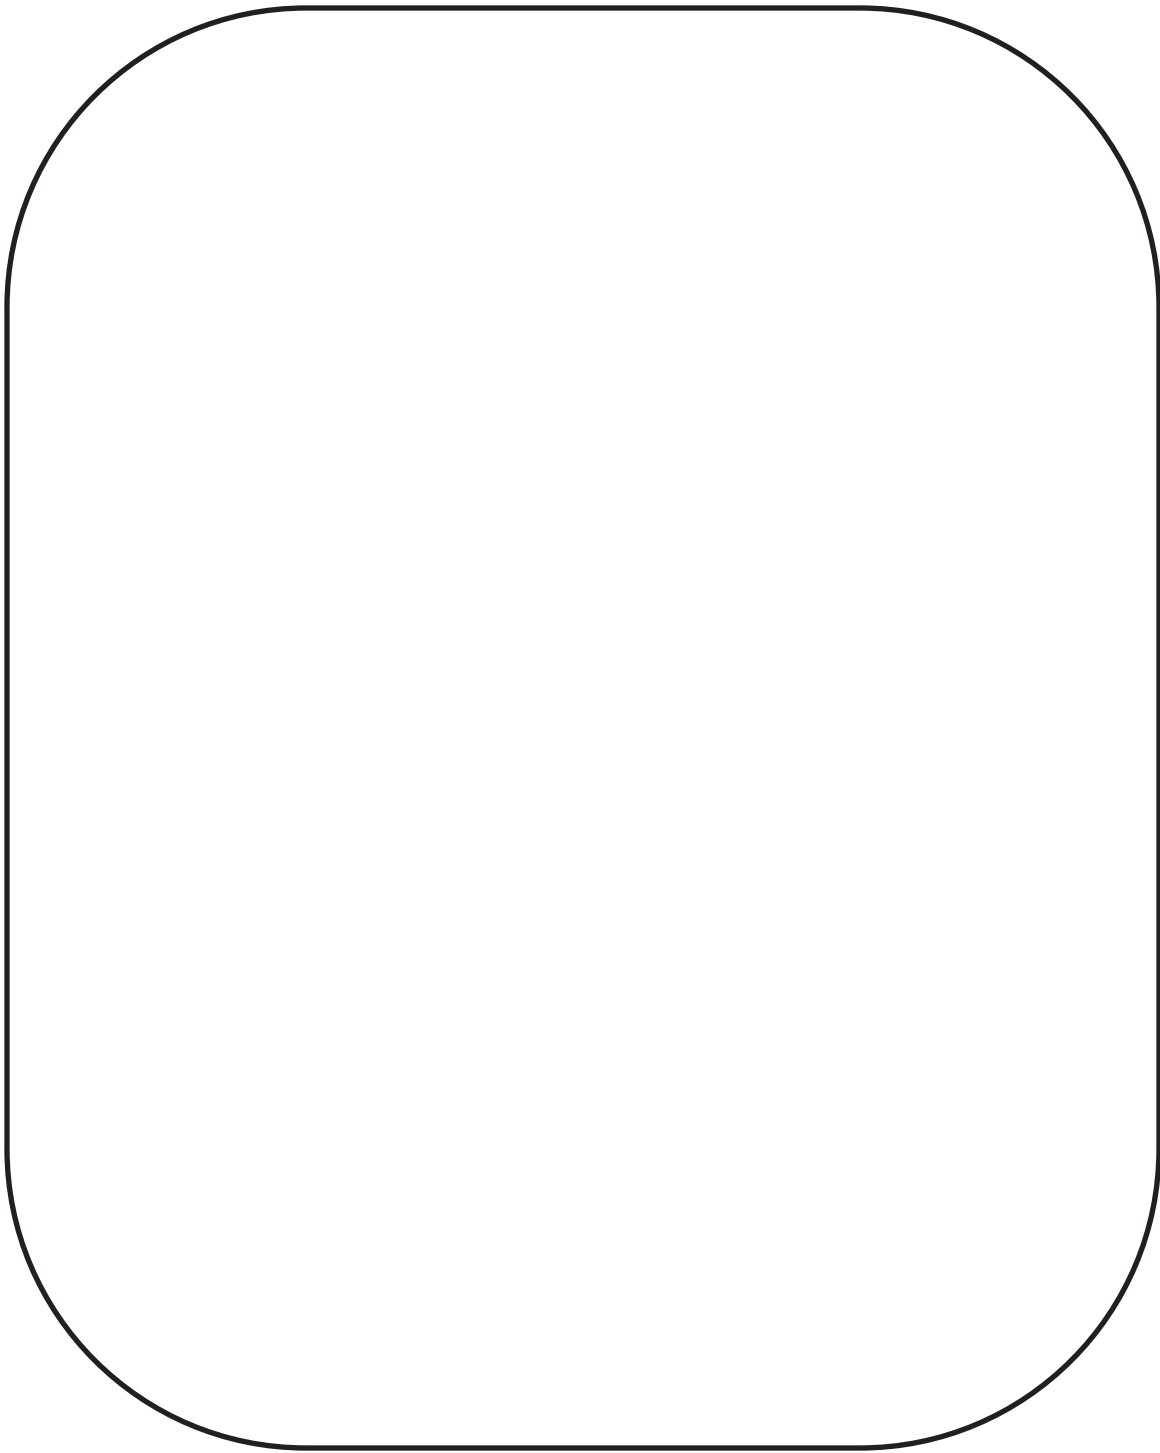

1. Tape the lightwire to try its length and direction. Is there enough wire? I eventually decided not to light up the forehead diamond because I tried and didn't like it lit.

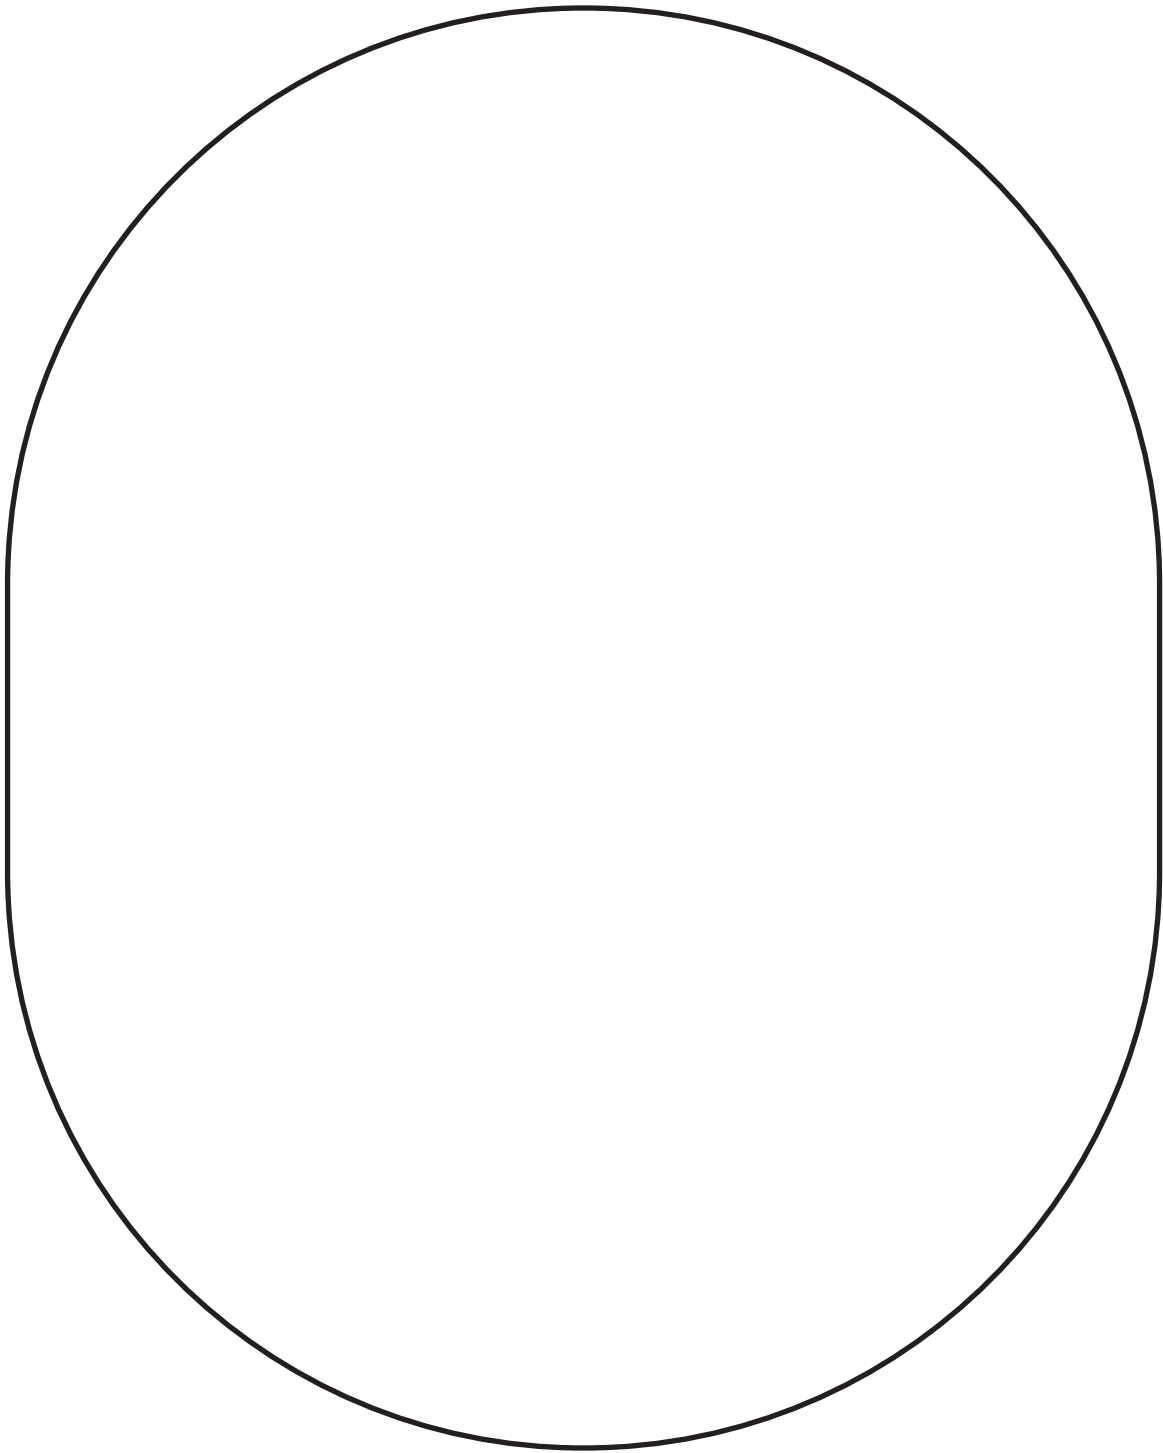

Helmet Stand: Bottom Part

1. Cut two pieces and glue them together; doubling will enhance the stand's durability.

Helmet Stand: Top Part

2. Cut two pieces and glue them together; doubling will enhance the stand's durability.

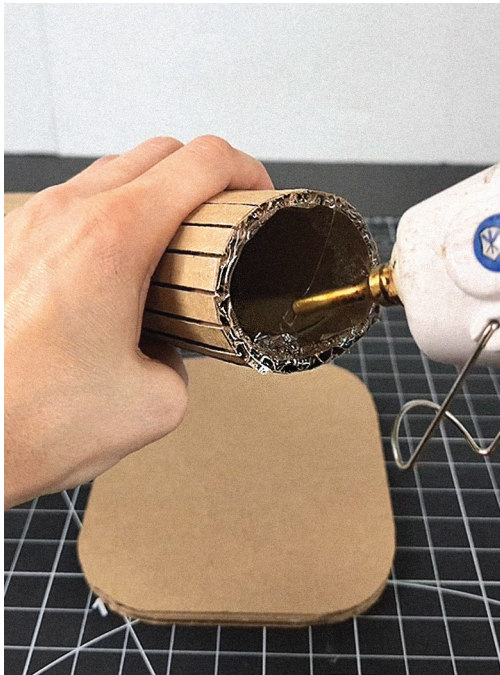

Helmet Stand: Assembling

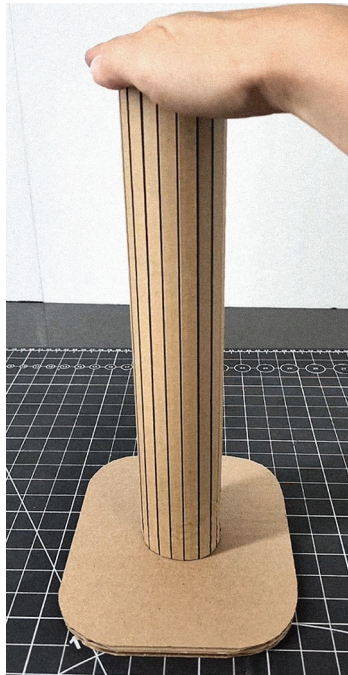

3. Take a 7x12-inch piece of cardboard. Cut slits along the longer side and create a wide paper bleed.

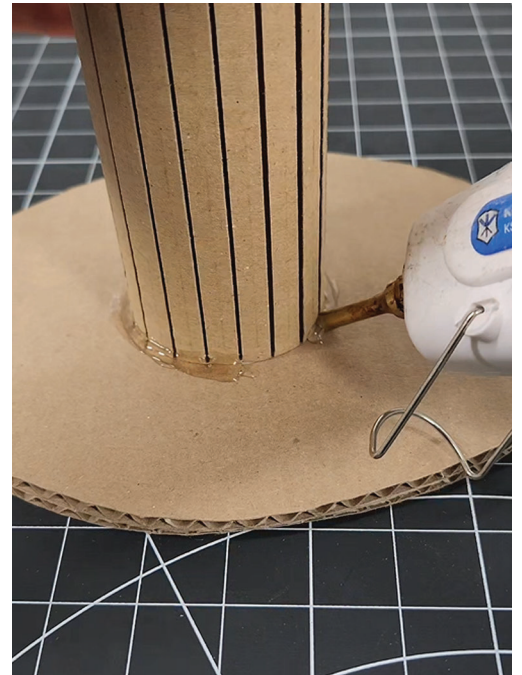

4. Apply plenty of glue to the paper bleed. Roll the cardboard into a tube and hold it until the glue cools and sets.

5. Apply a generous amount of glue to the edge and inside the tube.

6. Hold the tube upside down until the glue sets. Repeat with the other side.

7. Apply a glue rim on each side to secure the tube.
